

Self-Guided Tree Tours!

Let your residents interact with and learn from your tree inventory with Graf's new self-guided tree tours! Graf Tree Care can create custom interpretive signs for your parks or street trees that link directly to an interactive map of your trees.

Just scan the QR code on the sign, which opens a map your trees. Click on a tree to see its species, size, and other information. Your mobile device will show your current location right on the map! You can even have a web link directly in the tree information to learn more about the trees.

Contact Graf today about getting self-guided tree tours and interpretive signage set up to let residents start using your trees as an interactive educational resource for all ages!
